PSC Africa prepaid system

- Tenants purchase their own prepaid electricity at any time convenient to them
- The tenant can purchase according to what they can afford at the time and do not need to buy 50 or 100 units as tokens are available from as little as R20 and R50
- Landlords are free from ordering prepaid tokens, paying for them and then administering the sale to each tenant
- In the absence of the landlord the system continues to operate and tenants always have access to purchase tokens
- At month end all purchases are consolidated, reports are e-mailed to the landlords and they are paid for the prepaid units purchased by their tenants
- Prepaid units (kWh) are sold at a tariff determined by the landlord to recover electricity costs at the property. Normally this is the municipal or Eskom rate
- Additional fixed monthly charges can be loaded on the prepaid meter and must be paid for by the tenant before they will get a token
- PSC (Payment Services Consolidated) prepaid electricity can be purchased at any EasyPAY or UniPIN sales point, at many bank ATM's, through online banking, by EFT, sms debit order and Zapper
- A UniPIN prepaid electricity token is purchased and redeemed by following the instructions on the token
- When purchasing at an EasyPay till point the meter number will be required
- PSC, EasyPay and UniPIN help desks are available to assist tenants
- The landlord can request a purchase block on a meter if the tenant is in arrears for other payments
- Landlords have login and password access to real time, online reporting of all meter activity

For all queries please call the PSC Africa helpdesk on 0861073289
